

# Objective measurement of Physical Behaviour: (clinical) opportunities and developments

Prof. Dr. Hans Bussmann

Associate Professor Department of Rehabilitation Medicine, Erasmus MC University Medical Center Rotterdam (Netherlands), Vice & Past President of the Society for the Measurement of Physical Behaviour

Institut für Sport und Sportwissenschaft, Geb. 40.40

Do. 23.11.2017, 17:30–19:00 Uhr, Hörsaal

INSTITUT FÜR SPORT UND SPORTWISSENSCHAFT

The importance of physical behaviour – i.e. the body postures, movements and physical activities people perform in their daily life – is generally accepted. Technological developments progressively allow objective and precise measurement, which will increasingly affect clinical research and practice. In this Kolloquium an overview will be given of the background and some applications of objective measurement of physical behaviour, supported by recent examples of own and other research. Current relevant developments in this area will also be discussed.
